PHASE 1: Project Setup & Structure
Create a React app, folder structure, environment variables, and basic layout.
PHASE 2: Location Handling
Implement geolocation detection with fallback manual input.
PHASE 3: Google Maps Integration
Render map, markers, and user location.
PHASE 4: Places API Integration
Fetch nearby places dynamically based on mode.
PHASE 5: Filtering Logic
Apply mode-based filters (rating, type, price, open status).
PHASE 6: Sorting Logic
Sort by open status, distance, and rating.
PHASE 7: UI Integration
Connect map with list, highlight interactions.
PHASE 8: Polishing
Error handling, loading states, responsiveness, README.
